-2
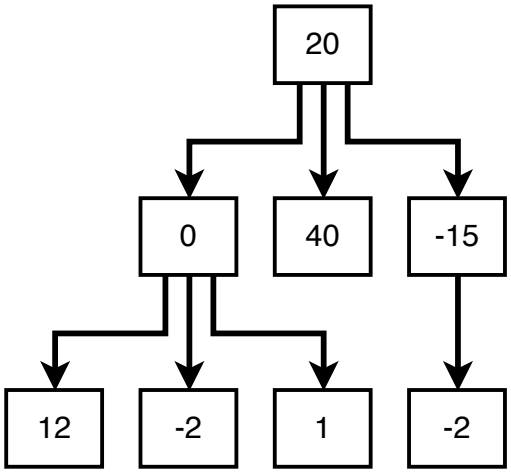
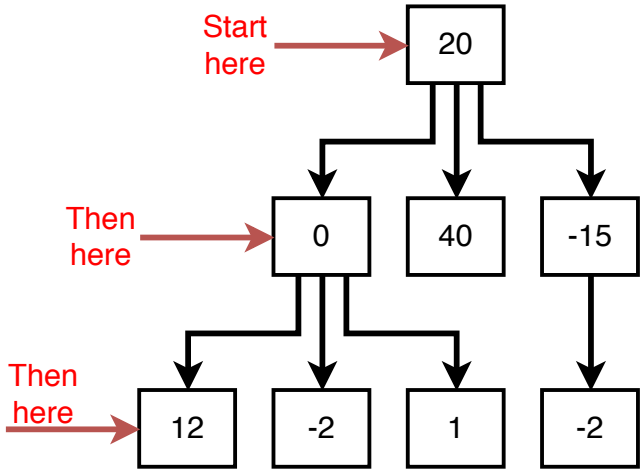
20 is the *parent* of 0, 40, and -15
12 and -2 are *siblings*

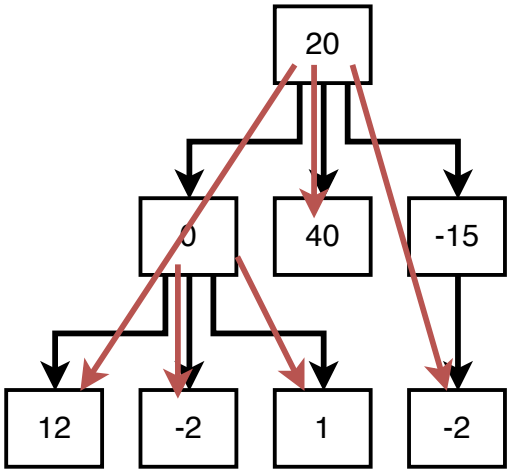


Iterating through a tree = traversal

There are different orders of traversal

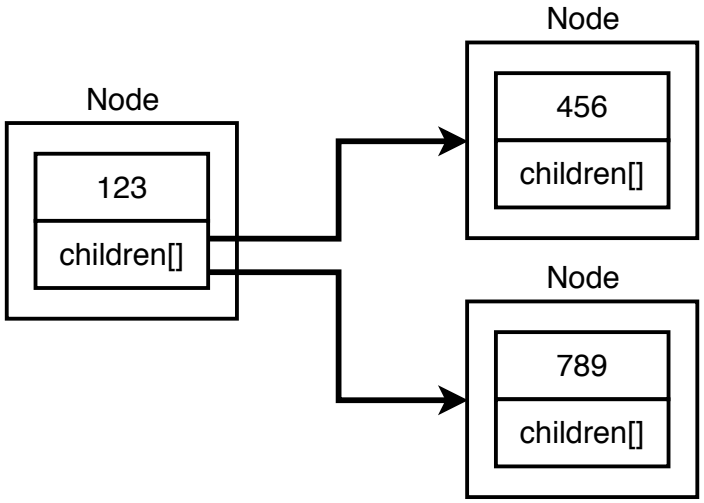


Breadth-First
Traversal

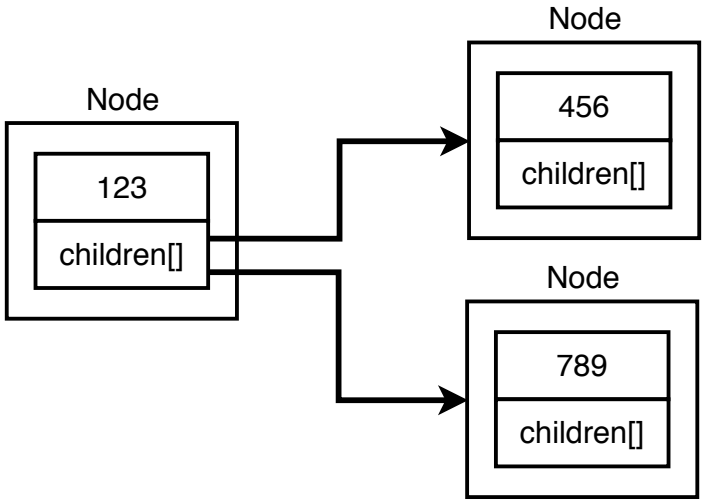


Depth-First
Traversal

20, 0, 12, -2, 1, 40, -15, -2



add(data)
Given some data, create a new node and add it to the current node's 'children' array



remove(data)
Given some data, look at each child of the current node and remove any node with data === data
